- **Hands on Experience** while Promoting your Personal and Professional growth
- Induction **Training**
- **Mentoring**
- On going **Job Training**

The Quality Technician will provide QA general support for the QA Contract operations team in Dublin within the EPD organization, ensuring that safe, efficacious and quality product can be supplied to Abbott to meet cGMP and other applicable regulatory standards and the appropriate market requirements.
Major responsibilities;

- Prepare Quality/Technical Agreements in line with local template requirements.
- Participate on QA cross-functional teams to support the TPM Managers on continuous improvement projects.
- Support activities related to complaint trend investigations for non-medical and medical (adverse events) complaints.
- Prepare summaries of the Annual Product Quality Reports provided by the TPM’s to ensure accuracy, completeness, timeliness, and those trends are identified and addressed in an appropriate manner.

Comments:
The TPM business is critical to the success of EPD since a majority of the top products are manufactured by TPM’s. The Quality TPM organization in the region supports Third Party Manufacturers covering pharma (sterile injectable, sterile liquids, freeze dried, sterile topical, oral solids and liquids, sachets, non-sterile topical and patches) and Active Pharmaceutical Ingredients (API).
The TPM QA organization supports external companies/TPM’s on a global basis.

Education:
Required: studying for a Bachelor’s Degree in Chemistry, Pharmacy, Biology, Microbiology Engineering or other technical/scientific area.

Background:
- An understanding of pharmaceutical manufacturing for finished dosage forms.
- Capable of understanding and overcoming different cultural and language obstacles to provide solutions that satisfy corporate, regional, and local objectives.
- Capable of analyzing data in order to support the development of strategies to effectively manage the action plans that will resolve the issues.

Other requirements include:
- Ability to communicate both written and orally, to management and across different cultural backgrounds.
- An understanding of international regulations for quality systems and compliance.
- Ability to identify problems, and initiate corrective actions and preventative actions.
- Perceptual and analytical problem solving relating to the removal of obstacles.
- Setting of priorities and or/facilities.
- Ability to use Quality Tools such as benchmarking, gap analysis, pareto analysis, fish-bone diagrams, and process mapping for fact base decisions making.
07/09/2015

**Accountability/Scope:**
- Accountability/Scope:
- The Quality Technician will work closely with the Product Quality Manager.
