

BLADDER CANCER DIAGNOSTICS WITH RAMAN CYTOLOGY

Bryan Hennelly, Laura Kerr, Shu Yu Wu, Ivor Cullen,
Katarina Domijan, Sinead Barton, Fan Xin

BINI 17th Jan 2015

Biophotonics Research Lab
Biomedical Engineering Group
NUIM

Gold standard in diagnostics for bladder cancer

- Patient presents with frank painless haematuria
- **Cystoscopy**
 - Fluorescence 5-ALA
- Urine cytology
 - Not used independently

Bladder Cancer

Cystoscopic Imaging

Histological Grade

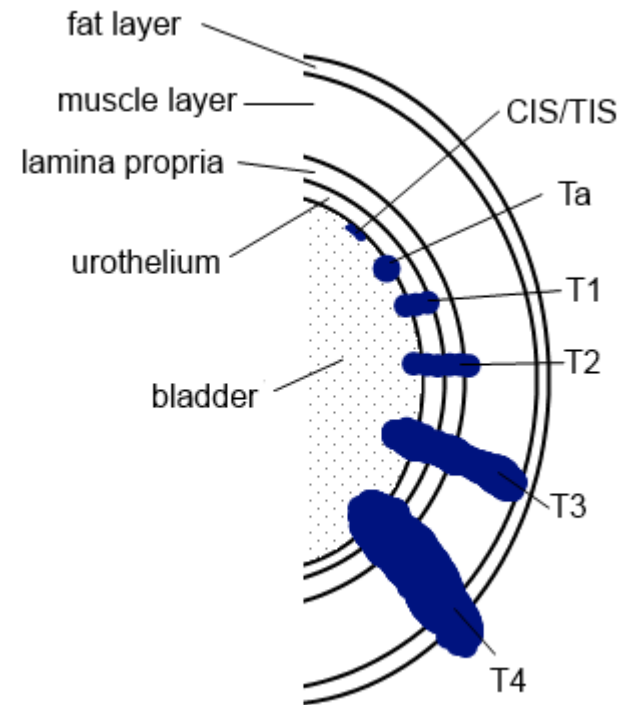

Normal cells

Poorly differentiated cancer cells

Pathological Staging

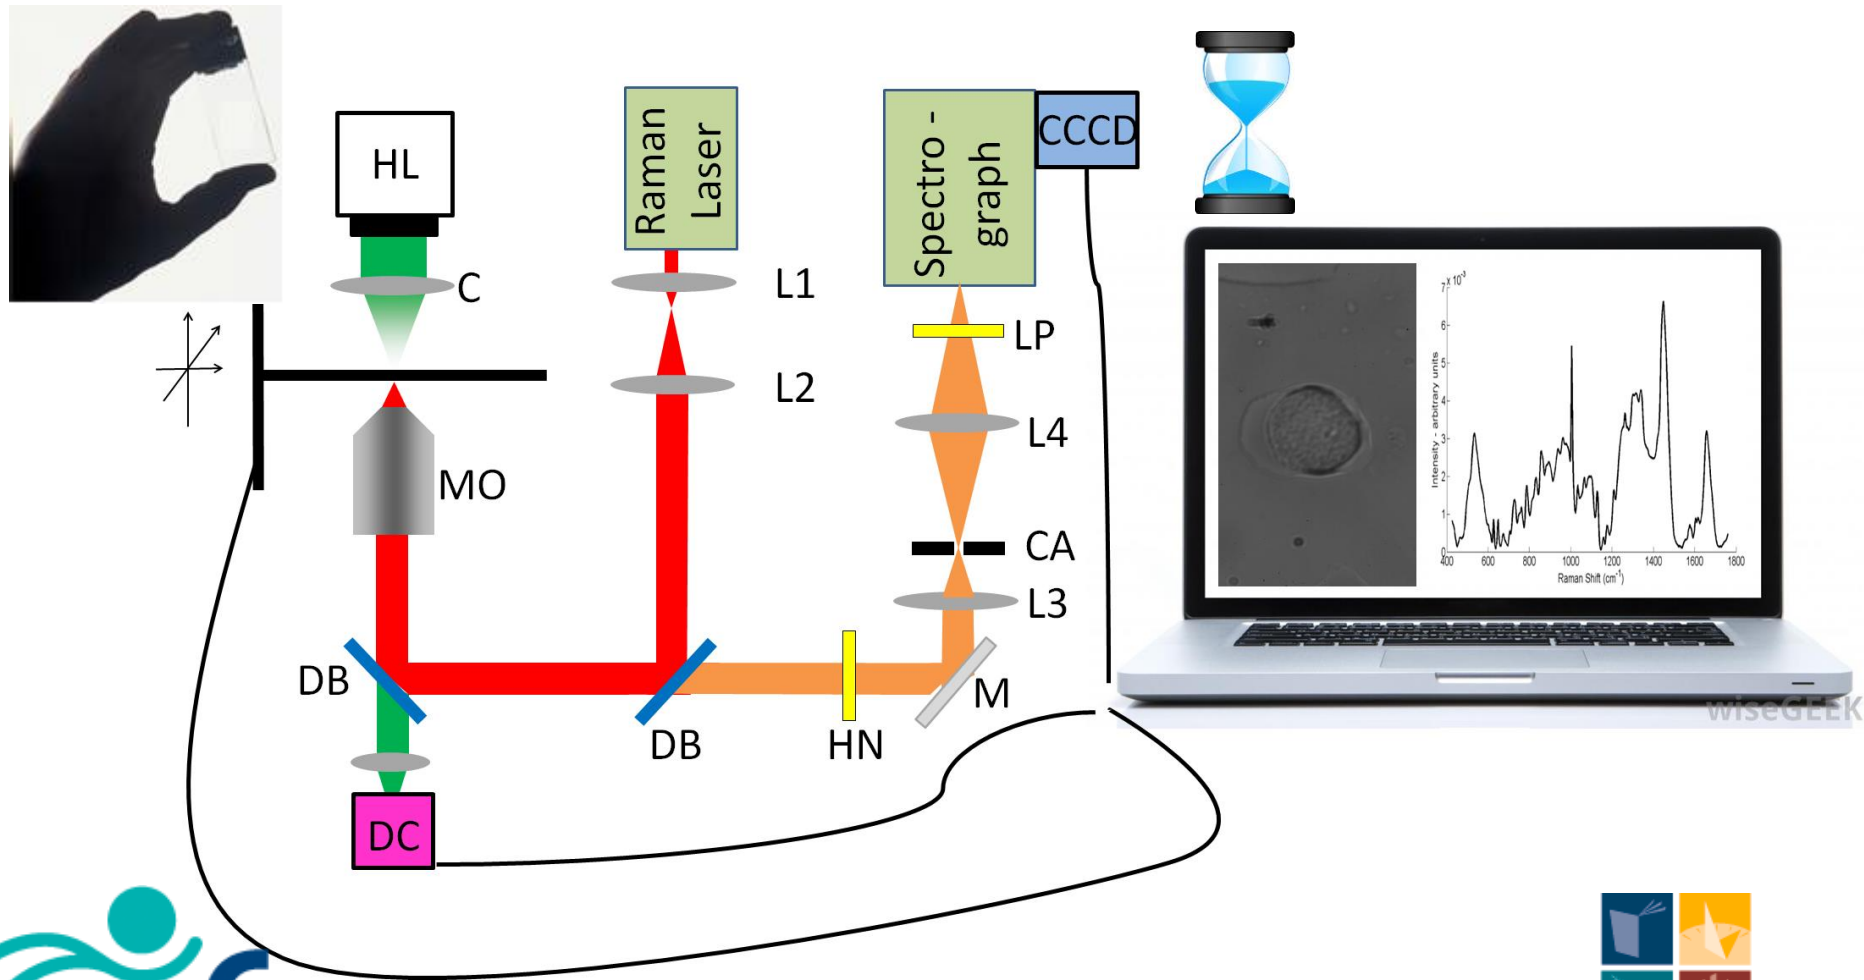

Inside the black box: urine cytology

- Urine cytology
 - 100% sensitive for high grade
 - 20% sensitive for low grade (75% of all cases!)

Inside the black box: Raman cytology

Chemometrics

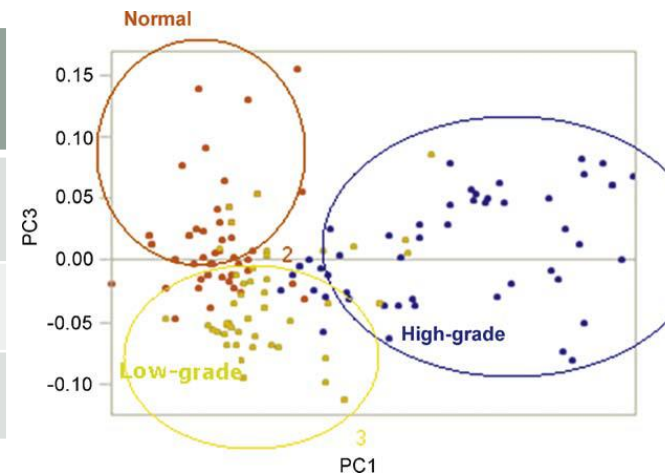

- Multivariate Statistical Algorithms can detect subtle variations across datasets
 - Classify blind sample
- PCA/LDA allows us to quantify the separation between two groups
- **Build up database**
 - Healthy cells
 - Low grade
 - High Grade

Previous work

- We conducted a large review of over 70 papers
- Only patient study to date: *Shapiro et. al. Journal of European Urology 59 (2011)*

	No. of cases	Detects cancer, n (%)	Correct grade, n (%)
No tumour	116	11 (9.5)	All classified low grade
Low grade	92	79 (95.8)	68 (73.9)
High grade	132	132 (100)	130 (95.8)

- Can we improve on this?
 - Better sensitivity/specificity
 - Suitable for the clinic??
 - Screening??? time taken

Wavelength/Substrates/Stats

- Exhaustive search for the best:

Slide Material

Laser wavelength

Statistical Method/ Algorithm

- Also completed considerable work on pre-processing of spectra to improve results
 - Noise removal
 - Wavelength Calibration
 - Background subtraction

Automated Raman Cytology

- Basic system designed/patented
 - Image processing used to scan slide, identify and align cell nuclei with source laser

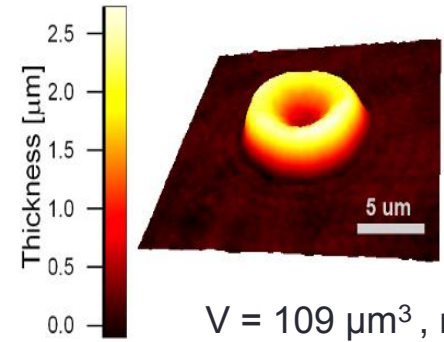

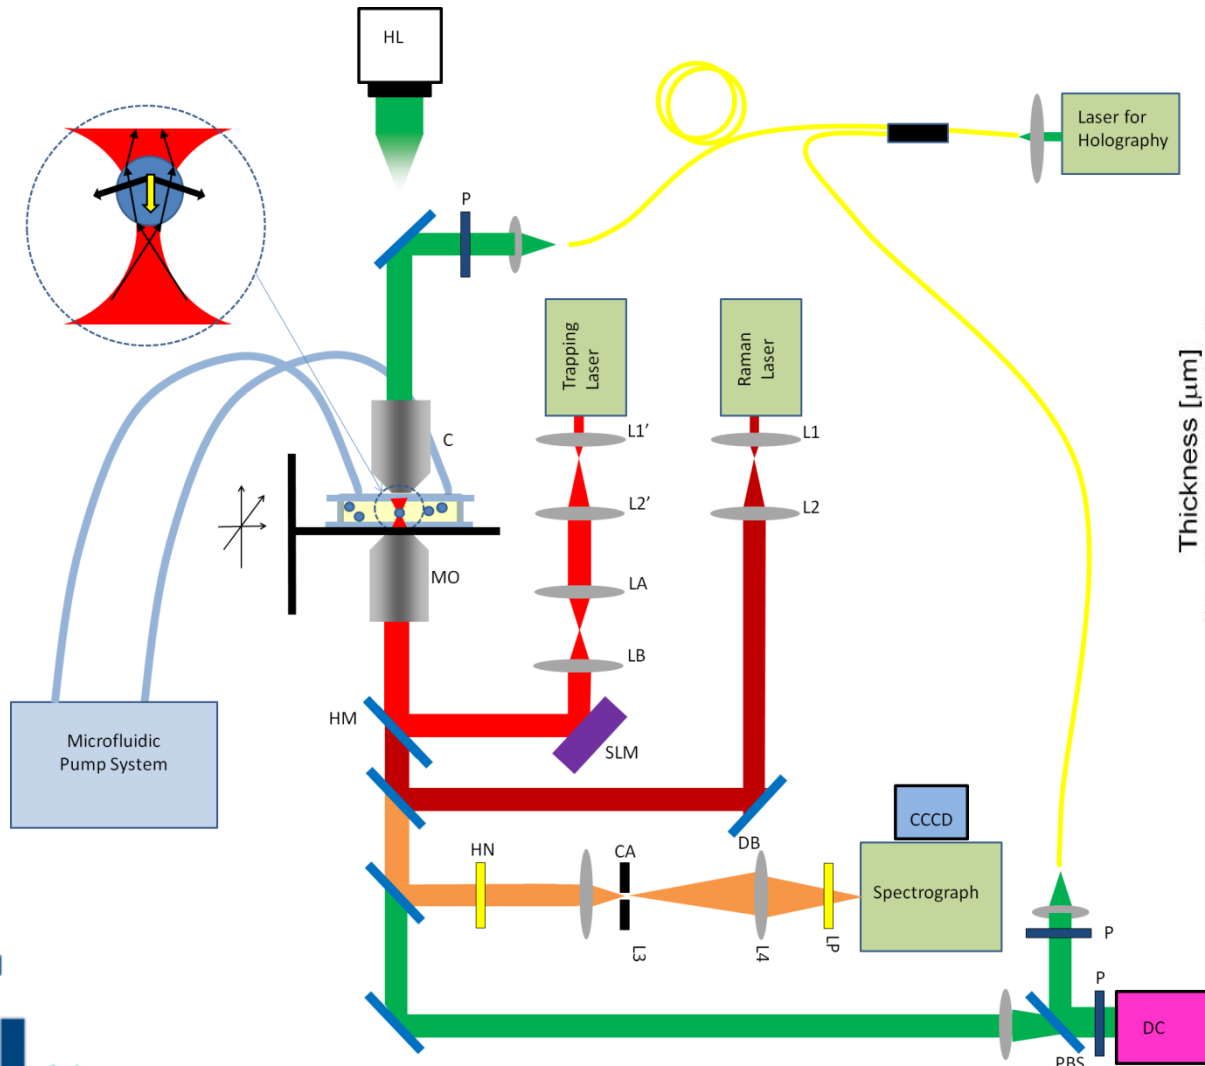

Figure 1: Automated Raman cytology system set-up

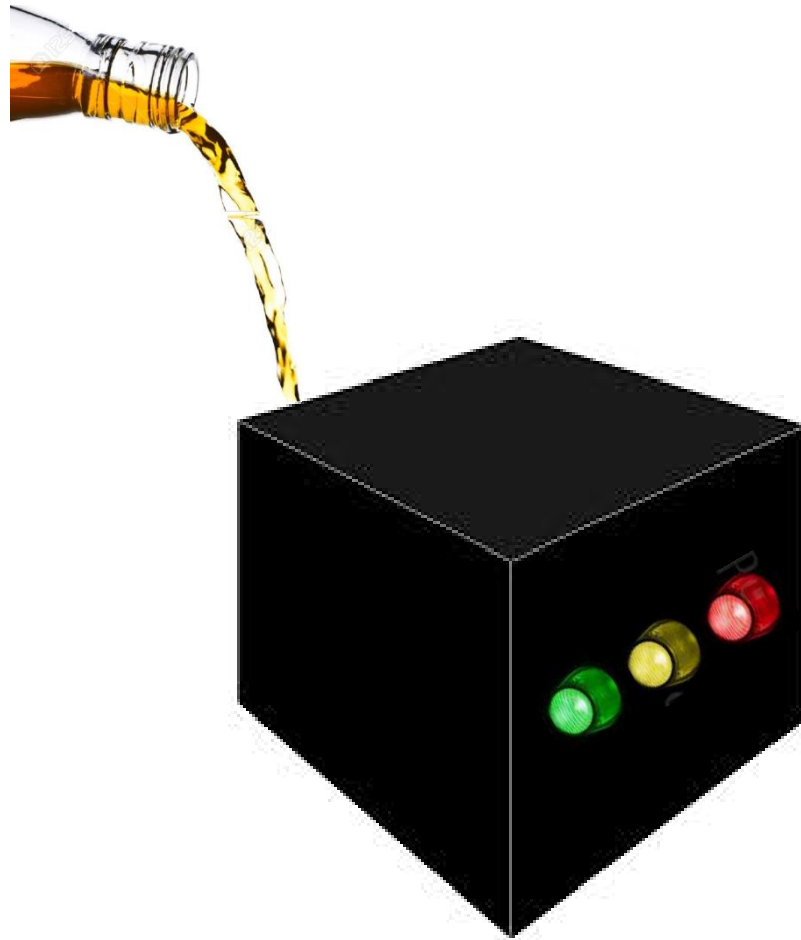

Next step: Medical Trial

- Fixing study
 - Vial with 50% ethanol
 - ICA to separate ethanol spectrum
 - Test using 5 cell lines and using automated Raman
- Ethical Approval and medical trial 2015-2016 Beaumont Hospital

Future Work

Thanks to collaborators

- Institute of Immunology (Cell grow)
 - Shirley O Dea
 - Aine McAdams
- Tyndall National Institute (SERS substrates)
 - Daniela Iacopino
 - Alfonso Martin
 - Pierre Lovera
- Focas Institute (Raman cytology)
 - Hugh Byrne
 - Fiona Lyng
- Dublin Institute of Technology (Clinical)
 - Alison Malkin
- Beaumont Hospital (Pathology)
 - Christian Gulman
- Conway Institute, UCD (Exosomes)
 - Amanda McCann
 - Luke Gubbins
